FOUNDATIONS IN NUTRIGENOMICS

COMPLETE THE COURSE IN 4 WEEKS

Lectures by Dr Yael Joffe RD PhD FACN

Nutrigenomics is at the cutting edge of nutrition science. As interest in precision medicine increases, your patients will ask you about genetic testing. This course provides practitioners with adequate training to accurately and usefully interpret their clients' results and translate them into personalised and actionable diet, lifestyle and medical recommendations.

ABOUT THE FOUNDATION COURSE

The Foundations course is designed for health practitioners, educators and scientists whose services integrate cutting edge nutritional science into client or food solutions. Practitioners include: dietitians, medical doctors, specialist doctors, psychiatrists, nurses, nutritionists, dentists, chiropractors, physiotherapists and other allied health professionals.

WHAT CONTENT IS COVERED

The Foundations course is designed for health practitioners, educators and scientists whose services integrate cutting edge nutritional science into client or food solutions. Practitioners include: dietitians, medical doctors, specialist doctors, psychiatrists, nurses, nutritionists, dentists, chiropractors, physiotherapists and other allied health professionals.

HOW IT WORKS

Students will attend one full day (9h00 - 16h00) lecture per week for 4 weeks. Pre-requisite reading material will be released one week before lecture day and students will need to go through the material in preparation for the lecture. One module will be covered at each lecture and at the end of each session students are required to complete a 10-question multiple choice quiz.

Students will have access to online course material for all 4 modules up front.

SNP JOURNAL

Students will receive the 172-page ebook SNP JOURNAL, free of charge. The SNP JOURNAL has been developed to provide students with a clear and concise review of 40 of the most commonly encountered SNPs in commercial nutrigenetic tests. The SNP JOURNAL ebook is provided free to all Foundations course students.

Should they wish to purchase the printed book, this will be at an additional cost.

WHAT CERTIFICATION WILL STUDENTS RECEIVE

On completion of the Foundations course, students will receive a certificate from CTG Education, signed by both Dr Yael Joffe and Christine Houghton. Accreditation for the Foundations in Nutrigenomics course is provided by CTG, the training organization specifically tailored to the needs of the practising clinician.

CPD ACCREDITATION

Practitioners (students) will receive 25 level 3 CPD points and 5 Ethics points on completion of the programme.

NUTRIGENOMICS AS A GOOD BUSINESS OPPORTUNITY

Genome-based precision medicine, is an unavoidable important global trend. Today we know that rather than viewing our genetic make-up as a hand of cards that have already been dealt, we have the power to use the information encoded in our genes to help our patients make the best choices that will maximise their genetic and health potential.

The translation of genomics for clinical practice has become requisite for all health professionals. Practitioners, no matter their undergraduate degree or the nature of their practice, experience the inevitable knowledge gap between what they were taught at university, what they are reading in the scientific literature about genomics and the translation for their patients.

Clients, as well as many new medical and health companies, are looking for practitioners who are adequately qualified in translating evidence-based nutrigenomic research

NUTRIGENOMIC FOUNDATION 4-WEEK COURSE INCLUDES

- 4 x full day lectures by Dr Yael Joffe Rd PhD FACN
- Entire course content will be covered - 4 modules in total - 1 module per day
- Course provides training on the interpretation of nutrigenetic test results
- Free SNP Journal E-Book (20% Discount on hardcopy)
- Free access to online course material for 1 year
- 25 (level 3) CPD points and 5 Ethics CPD points.
- On completion of the course, you automatically subscribed to the IMPACT Network group where you become part of the Precision Medicine community. Invitation to monthly meetings for updates in the latest clinical knowledge.
